LISA V6.5 multi-source orchestrator test | 2026-08-20 | generated from local data

## LISA V6.5 multi-source orchestrator test

- Created at: 2026-08-20T05:33:58Z
- Normalized signals: 2865
- Clusters: 2110
- Qualified clusters: 18
- Final portfolio: 10
- Portfolio capacity: 10
- API calls used: 0
- LLM calls used: 0
- Watchlist persistence: PASS
- Structured Trends store: PASS
- GitHub evidence propagation: PASS
- GitHub raw clusters: 54
- GitHub candidate universe: 41
- GitHub lane-scored: 41
- GitHub rejected: 41
- GitHub qualified: 0
- GitHub final: 0

### Source Coverage Audit

- GSC: CHECKED
- GA4: CHECKED
- WordPress: CHECKED
- GitHub: CHECKED
- Google Trends: CHECKED
- Google News / News: NOT IMPLEMENTED
- Reddit: NOT IMPLEMENTED
- X: NOT IMPLEMENTED
- YouTube / community: NOT IMPLEMENTED
- AdSense: NOT IMPLEMENTED

### Rejections

- Stale / saturated: 871
- No unique value: 805
- Weak demand/evidence: 416

### Lane counts

- Qualified by lane: {"SEO / SEARCH OPPORTUNITY": 7, "UPDATE / REWRITE": 10, "CURRENT DEMAND / TREND": 1}
- Selected by lane: {"CURRENT DEMAND / TREND": 1, "SEO / SEARCH OPPORTUNITY": 5, "UPDATE / REWRITE": 4}

### TOP 10 diversified candidates

1. redmi k100 pro max

- repository: ga4

## GitHub watchlist promotions

- None

## Implemented / Partial / Not implemented

### Implemented

- GitHub read-only delta ingestion, raw signal storage, clustering, and persisted watchlist re-evaluation
- GSC local CSV ingestion and query/page normalization
- GA4 local CSV ingestion and page/landing-page normalization
- WordPress local CSV ingestion and duplicate-baseline index
- Structured Google Trends SQLite cache with bootstrap ingestion from the local editorial report
- Cross-source normalized signal layer and unified candidate universe
- Global ranking, counterfactual top1/top3, and marginal portfolio selection
- Test-mode reporting with no remote API calls
- GitHub watchlist promotions persist back into the GitHub watchlist DB

### Partially Implemented

- Source Coverage Audit is explicit for the connected layers, but News/Reddit/X/YouTube/AdSense remain placeholders
- Reality / information age / WP / unique value gates are implemented heuristically from local evidence, not by a full newsroom model
- Structured Trends cache is seeded from the local editorial report until a dedicated live Trends ingest is available

### Not Implemented

- Google News / News automation
- Reddit sensor
- X sensor
- YouTube / community sensor
- AdSense / revenue source
- Automatic WordPress publication
- Automatic multi-source remote API sync beyond existing local exports

### Failed Needs Fix
